About Me :)

- From Puerto Rico 🌴.
- Babysit my younger sister 💖.
- Love fishing 🎣.

Project Overview

- I'm developing an online store platform similar to Amazon or eBay 🛒.
- It's designed to help e-commerce companies expand their business 🚀.
- I integrate crucial store entities and store all data in MySQL 🔍.
- Accessible through Controller Requests for testing via Postman 🖥️.

Technical Challenge

```
@JsonTypeInfo(use = JsonTypeInfo.Id.NAME, property = "type")
@JsonSubTypes({
    @JsonSubTypes.Type(value = Seller.class, name = "Seller")
})
public class Employee {
```

...?

- Program **struggled** to distinguish Employee types from Sellers for data export 
- Overcame by studying JSON and JPA documentation 
- Consulted bootcamp bot for solutions

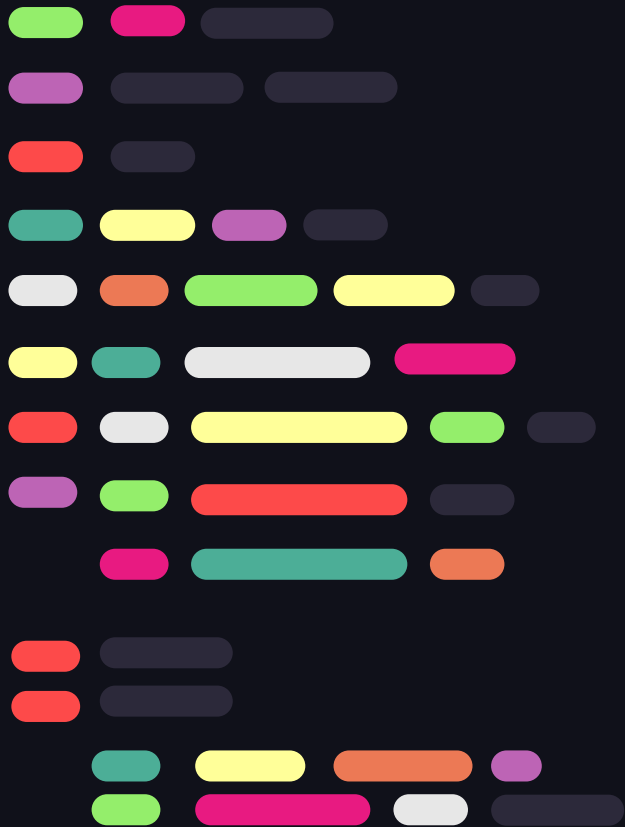

Big Mistake

- Made significant changes in a single commit instead of incremental commits with clear progress 🔄
- Learned the importance of smaller, more frequent commits 📝

All in one commit

Showing 43 changed files with 781 additions and 160 deletions.

DEMO!

Thank you!
